DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 9/03 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner is considering the information disclosure statement.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Watanabe et al. Watanabe (012) teaches a naphthoquinone derivative and an electrophotosensitive photoreceptor. The naphthoquinone derivative has an improved electron acceptive properties due to an action of a carbonyl group substituted on a naphthoquinone ring and is also superior in solubility in solvent and a compatibility with binding resin due to an action of an alkyl or aryl group substituted on the naphthoquinone ring . note Col.3 lines 5-10. The compounds are in Col.4 & 5. It is the lack of the alkylene , when n=0 that the compounds are matched . Applicants' have not shown any unexpected results in a compound where the alkylene is 2-20 carbon atoms.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Itami et al in view of Watanabe et al. Itami et al teaches the photoreceptor as a photosensitive drum note Figure 1 and Col. 35 line 64. The cartridge is found employing the photoreceptor note Col. 4 lines 25-30. The apparatus can have a common electrophotographic techniques note Col. 37 lines 35-45 . The photoreceptor can have a naphthoquinone in a charge transfer structure note Col. 19 lines 35-40. Itami et al fails to teach the specific naphthoquinone. Watanabe et al teaches the specific naphthoquinone in a charge transfer structure. It would be obvious to one of ordinary

skill in the art at the time of applicants' invention with a reasonable expectation of success to use naphthoquinone of Watanabe and the superior charge transport and solubility as the naphthoquinone in the drum, cartridge and apparatus of Itami in improving the photoresponsive properties of the photoreceptor.
